CONTINUING AND PROFESSIONAL EDUCATION

Pruning and Care of Landscape Fruit and Nut Trees

Non-credit.

Learn how to prune all major types of fruit trees for aesthetic beauty, maximum fruit production, good fruit size and optimal annual production. Look at the bearing habit and proper pruning methods used to maintain productive fruit and nut trees.

Specific pruning instructions are provided in lecture format for apple, pear, peach, plum, cherry, apricot, almond, walnut, citrus, persimmon and olive trees. Lecture is followed by actual field pruning demonstrations on several of these species in the campus orchards. Also learn about basic irrigation, fertility, weed control, fruit and nut thinning, and pest control of these trees, with an emphasis on organic and minimal pesticide use for fruit and nut trees around homes.

This course is designed for homeowners and professional landscapers seeking information on the management and care of home fruit trees.

Instructors

JOSEPH CONNELL is a farm advisor with UC Cooperative Extension, Butte County, specializing in almonds, olives, citrus, subtropicals and ornamentals.

PAUL VOSSSEN is a farm advisor with UC Cooperative Extension, Sonoma County, specializing in tree fruit and nut crops, vegetable crops and small farm specialty crops. He coordinates an educational and scientific research program that is responsive to the needs of approximately 1,000 farmers in Sonoma and Marin counties.
