

Emergency Response Aviation Safety Management Certificate Program

Developed by UC Davis Extension, the U.S. Forest Service and the UC Davis College of Engineering

This certificate program was developed in response to concerns about the structural health of U.S. public use firefighting aircraft. Learn about the critical factors involved in aircraft health management, and examine the decision-making processes, communication skills and technology required for coordination and cooperation during emergency response situations.

Designed for professionals like you

- Aviation safety officers
- Emergency services pilots
- Forest firefighter aviators
- Border patrol aviators
- Medical-air transport personnel
- Law enforcement and homeland security aviators
- Aviation services contracting officers
- Aviation specialists and consultants
- Those involved with the retrofitting, operation and maintenance of aging aircraft
- Anyone involved in the field of aviation emergency response

Certificate courses

Communications: Program Management—October 21-22, 2010

Communications: Operations Management—October 26-28, 2010

Aircraft Health Management—November 1-4, 2010

Aircraft Health Management is approved by the FAA for Inspector Authorization Renewal Training with a course acceptance number and may also be credited toward the Aviation Maintenance Technician Awards Program.

Human Factors and Operational Risk Management—January 25-28, 2011

Safety Program Management—January 31-February 3, 2011

Aviation Leadership—February 8-11, 2011
