UC DAVIS EXECUTIVE LEADERSHIP PROGRAM

**TRANSFORM.
INSPIRE.
ACHIEVE.**

Learn to adapt and thrive in the face of change. Gain practical strategies you can apply immediately.

Interactive sessions will expand your ability to confidently guide your organization. 360-degree assessment will provide you with the self-awareness and meaningful feedback essential to developing your capacity to lead. Coaching sessions will support you in achieving the goals you establish in the program.

The eight-week spring cohort begins March 29.

Apply online at extension.ucdavis.edu/execprog

Student Spotlight: Terri Taylor

“If I had to do it again, I’d choose UC Davis Extension. It’s just a phenomenal program.”

—Terri Taylor, Independent consultant and graduate of the Accounting CPA Exam Track Certificate Program

Wanting an accounting program that would work with her schedule, teach practical skills and provide a good return on her investment, Terri Taylor found what she was looking for in UC Davis Extension’s *Accounting CPA Exam Track Certificate Program*.

Why did you decide to pursue an education in accounting?

I’m a career changer. My background is in business, but I wanted to transition into accounting because I saw tremendous growth and opportunity in this field. When you think about the fact that accounting is in every single industry—in both the public and private sectors—there’s just numerous opportunities for accountants and CPAs. Accounting is almost a “recession proof” industry. Accountants are always going to be necessary.

Why did you choose UC Davis Extension for your accounting education?

I looked at other similar programs that cost more, but they had prerequisites. UC Davis Extension requires no accounting background and gives you the training you need to enter the field or prepare to take the CPA exam. For me, Extension had everything I was looking for: a streamlined program that could be completed quickly; access to experts in the field; and an online format that was easy to use, yet didn’t sacrifice any interaction with students and instructors.

What was the most valuable aspect of the program for you?

Having access to real-world practitioners. Every class was taught by an instructor who is a practicing accountant. So, not only was I getting the education I needed, I was also learning practical skills that accountants need—like time management—from experts. Getting this kind of “real-world” training was extremely valuable. There wasn’t a single question I couldn’t ask my instructors. The quality and accessibility of the instructors was a real difference maker. If they were just strict academics, I don’t think they would have been able to address all my questions.

I also appreciated the fact that I was able to apply what I learned in real-time. When I started this program, I was serving on a board of directors as a finance chair for a non-profit. I was able to take the info I learned in the program and apply it in my job, easily explaining complex accounting concepts to non-finance people.

Would you recommend this program to others?

If I had to do it again, I’d choose UC Davis Extension. No question. It’s just a phenomenal program. The accessibility to instructors and their expertise is a big draw. I also think it’s an excellent alternative for those considering a master’s program, because it meets all the core accounting education requirements for the CPA exam, which I plan to take.

To learn more about our Accounting courses and certificate programs, please visit: extension.ucdavis.edu/accounting.

Spring Accounting courses are listed on page 5.

Instructor Spotlight: Brian Paciotti

“Looking at the quality of data and analyzing it carefully can save patient lives.”

—Brian Paciotti, Healthcare Analytics Instructor

Brian Paciotti has always been interested in science and research, but he is also passionate about anthropology.

“Healthcare analytics is part of anthropology,” he says. “If you’re going to use data to make better decisions, you first have to understand the particular workflows related to how care is provided, and that often involves an ethnographic analysis of how culture impacts the behavior of patients, doctors and administrators.” He explains that once data are contextualized, it’s possible to use statistical and data-mining approaches to create meaningful and actionable information. Paciotti, an instructor in the Healthcare Analytics Program, teaches because he believes that analytics done properly can lower costs, improve access and reduce medical errors.

How did you become interested in healthcare analytics?

I became interested in health analytics while working for a state agency that profiled the quality of hospitals in the state. I learned that administrative data could be used to evaluate healthcare quality—looking at the quality of data and analyzing it carefully can save patient lives.

Why is healthcare analytics important?

Healthcare analytics is important because health care in the United States is somewhat broken. We have the most expensive system in the world, yet our outcomes with regards to who gets the right care at the right time is not always the best. In addition, our country is debating how to either expand or reduce healthcare access for our citizens. These decisions, and the more local day-to-day decisions among leaders within provider organizations and plans, need to be based on actionable information and knowledge. Data—properly analyzed—can provide this information.

Describe a moment when, as a teacher, you had an impact on a student’s life.

I was once told that it would not be easy—and maybe impossible—to teach programming to students in an online environment, especially to students with non-programming backgrounds. However, I have had non-programmers come to my courses and actually learn strong programming skills! And they have been grateful for the challenging, yet positive environment in which they learned these skills. These students now feel like they can talk to programmers with more rigor and confidence. Learning new skills, especially complex ones, is not easy. I feel great knowing that my courses actually result in important new skills that will really help my students.

To learn more about our Healthcare Analytics courses and certificate program, please visit: extension.ucdavis.edu/healthanalytics.

Spring Healthcare Analytics courses are listed on page 8.

ARTS AND HUMANITIES

Spanish

Learn to speak Spanish at home using a fun, creative format. Take these convenient online courses and receive transferable university-level academic credit.

ONLINE

Spanish Without Walls: Elementary Spanish III

April 2-June 29 • \$585 • Enroll in section 174SWW212.

AUTISM SPECTRUM DISORDER

As the first university-based autism program for those who work with children on the autism spectrum in California, and the only program affiliated with the prestigious UC Davis MIND Institute, we pride ourselves on providing you with the highest quality, research-based education available in Autism Spectrum Disorder.
